Mountain Weather Forecast

Peak District National Park

Forecast valid from 06:00 on Sunday 18 Dec 2022 until 23:59 on Monday 19 Dec 2022

Forecast Issued on Sunday 18 Dec 2022 at 00:20

Confidence: High confidence for a windy and wet day on Sunday with a rapid change to milder conditions in the evening. Moderate confidence for a period of freezing rain during the afternoon as precipitation changes from snow to rain. Mild and windy for much of Monday. Lower confidence on timings of rainfall and cloud levels.

Headline for Sunday 18 Dec 2022: Dry morning. Rain, sleet and snow moving east in the afternoon, gales expected, hazardous conditions later.

Mountain weather hazards on Sunday 18 Dec 2022

Blizzards Low Likelihood	**Heavy persistent snow** No Likelihood	**Storm force winds** No Likelihood
Gales Medium Likelihood	**Severe chill effect** Medium Likelihood	**Poor visibility** Medium Likelihood
Thunderstorms No Likelihood	**Heavy persistent rain** No Likelihood	**Strong sunlight** No Likelihood

Cloudy	Light snow showers	Light snow	Sleet	Heavy Rain	Light rain
Precipitation probability					
10%	40%	60%	50%	80%	60%

Forecast for Sunday 18 Dec 2022

Weather: Dry at dawn but quite cloudy. Strong southeasterly winds developing during the morning with showers of snow possible. A band of sleet or snow, soon turning to rain will spread east causing an ice hazard underfoot and the risk of freezing rain. Sleet and rain will turn heavy at times during the afternoon and winds strengthening to gales for a time on the higher summits, this will make for hazardous conditions on the hills with poor visibility likely too. Drier later but drizzle and fog likely to linger and snowmelt, likely to occur during the evening, will turn the ground very boggy.

Chance of cloud-free hill tops above 600m: 90% falling to 30% later.

Low cloud and visibility: Initially good visibility and very little cloud below the summits but by late morning layers of cloud will start forming above 400m, becoming broken or extensive in the south, possibly more scattered around eastern hills. Visibility will turn poor or even very poor in fog patches and heavy sleet and rain.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

A severe wind chill early in the day in strong winds but note how rapidly freezing level rises later in the day. Gales will cause buffeting and drive sleet and then rain into the area, with the risk of freezing rain turning things very icy. A rapid thaw is likely to begin during the evening as temperatures rise.

Recent rainfall: measured at Cat & Fiddle: altitude 511m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
03:00 on Sun 18 Dec 2022	0mm	0mm	0.2mm

Forecast for Monday 19 Dec 2022

Weather: Feeling milder than recent weeks and a wet and windy day with gales expected on higher summits. Outbreaks of rain throughout the day and falling as rain at all levels, a rapid thaw is likely with conditions underfoot becoming very wet and water courses becoming full. Perhaps dry for a time in the afternoon and later in the evening but remaining cloudy.

Maximum wind: Southerly 25-30mph gusts 40-45mph

Chance of cloud-free hill tops above 600m: 20% rising to 50% later.

Low cloud and visibility: Broken or extensive low cloud layers above 300-400m in the morning, perhaps more scattered further east. Visibility will be poor in outbreaks of rain but becoming moderate later as rain becomes lighter. Cloud will thin and lift a little towards 500-600m in the afternoon with some gaps at times.

Temperature: **Valleys:** Plus 7 rising to 13 Celsius.
At 600m: Plus 7 Celsius
Freezing level: Above all summits
